EDUCATION

B.Tech Computer Science (IoT), SRMIST, Chennai

Aug 2023 – Jun 2027

GPA: 8.45 / 10 | Relevant: Data Structures & Algorithms, Object-Oriented Programming, Operating Systems, Database Systems, Distributed Computing

SKILLS

Backend: Python (FastAPI), Go, Node.js, Express, TypeScript, JavaScript, REST API Design & Documentation

Frontend: React.js, Next.js, Tailwind CSS

Databases: PostgreSQL, MySQL, MongoDB, Schema Design, Role-Based Access Control

Tools & Cloud: Git, Docker, AWS (S3, IAM), Unit & Integration Testing

AI: LLM APIs, RAG, LangGraph, Whisper, CLIP, AI-assisted development

EXPERIENCE

Freelance Software Developer | Rotex Manufacturers & Engineers Pvt. Ltd.

Apr 2026 – Sept 2026

- Developed a full-stack hiring platform in Next.js, TypeScript, Tailwind CSS, and PostgreSQL, integrating GPT-4o interview generation, Whisper transcription, and AI content detection to cut manual screening effort by 50%.
- Designed a 15-table schema with role-based access control and audit logging, structured as Route Handler → Zod validation → Service → Repository for a clean, scalable codebase.
- Owned the product end to end, from gathering requirements with the client's HR team to deployment, and shaped features around feedback from recruiters using the platform daily.

AI Engineer Intern | UpstageX Private Limited

Aug 2026 – Sept 2026

- Evaluated LLM configurations using the Anthropic API in Python, comparing outputs against expected results.
- Prepared and validated 100+ customer-support text samples for model evaluation, including cleaning and formatting.
- Supported AI/ML integration tasks in the team codebase, collaborating remotely through Git.

Research Intern — Computer Vision | SRMIST, Chennai

Jun 2025 – Jan 2026

- Deployed an ANPR pipeline on Raspberry Pi 4 using OpenCV and Tesseract OCR, reaching 94% plate recognition accuracy across 1,000 test scenarios and 99.2% uptime over 60 days.
- Tuned detection algorithms and calibrated hardware, then co-authored a paper on the system accepted for oral presentation at AICoNS 2026 (AIP Conference Proceedings, Scopus indexed).

PROJECTS

raft-lite, Distributed Consensus Engine | Go, Next.js | [GitHub](#)

- Built the Raft consensus algorithm from scratch in Go, with leader election, log replication, and crash recovery, and validated it across 1, 3, and 5-node clusters with 207 automated tests.
- Added a real-time Next.js dashboard to monitor the cluster, showing leader changes, node status, and log syncing as servers fail and recover.

CreditAI, Credit Scoring System | FastAPI, XGBoost, React | [Github](#) | [Live](#)

- Scored loan applicants with 0.93 ROC-AUC (11% better than logistic regression) by combining an XGBoost model with rules like income and debt-to-income ratio.
- Gave 3 user roles controlled access to loan decisions through role-based REST APIs and a React dashboard.

Multi-Agent AI Incident Investigation System | Python, LangGraph, Gemini | [Github](#)

- Automated incident root-cause analysis with 8 AI agents (logs, metrics, deployments, etc.), producing 32 evidence records and 3 competing hypotheses per incident.
- Added a Next.js dashboard so engineers approve fixes before they run, backed by 230+ automated tests with 0 failures.

ACHIEVEMENTS

- Runner-up (out of 45+ teams) at Hackathon 9.0 (Hack2Skill): built a machine learning model to predict likely diseases from patient-reported symptoms.
- LeetCode 100 Days Badge: 200+ DSA problems solved, majority rated Medium/Hard | [LeetCode profile](#)
- SAP Certified – Back-End Developer – ABAP Cloud | [Badge](#)
- AWS Cloud Foundations Certificate
